AMENDMENTS TO THE CLAIMS

1. (Cancelled)

^c 2. (Previously Presented) A polymer of Formula 1A:

where:

R₁ is hydrogen or methyl;

R₂ is a divalent residue derived from alkyl or alkoxy hydroxy (meth) acrylate(s); R₃ is a divalent residue derived from aliphatic, cycloaliphatic, heterocyclic and/or aromatic diisocyanate(s);

R₄ is a divalent random block copolymer backbone of Formula 2A:

Formula 2A

where:

A is a divalent residue derived from one or more acrylic-derived polyol(s); B is a divalent residue derived from one or more rubber-derived polyol(s); m and n are independently an integer from 1 to 20; and p is from about 2 to about 50.

3. (Previously Presented) A polymer as claimed in claim 2 having a z-average molecular weight (M_z) measured by gel permeation chromatography (GPC) from about 50 to about 5,500 kilo Daltons (kDa).

- 4. (Previously Presented) A polymer as claimed in claim 2 having a weight average molecular weight (M_w) measured by GPC from about 1 to about 1,000 kDa,.
- 5. (Previously Presented) A polymer as claimed in claim 2 having a number average molecular weight (M_n) of from about 1 to about 100 kDa.
- 6. (Previously Presented) A polymer as claimed in claim 2 having a density of radiation curable functional groups (measured as molecular weight per group) from about 1 to 150 kDa.
- 7. (Currently Amended) A method for making a urethane (meth)acrylate polymer as claimed in claim 2 in a two stage process comprising the steps of:
- (a) first, building an isocyanate terminated pre-polymer by a urethane condensation reaction between a mixture of polyols derived from acrylic and rubber polyols and excess NCO groups provided by diffunctional isocyanates,
- (b) followed by capping the isocyanate terminated pre-polymer with hydroxyl groupcontaining (meth)acrylates.
- of preparing a UV curable urethane (meth)acrylate polymer by reacting a hydroxyl functional ethylenically unsaturated polymer precursor with one or more di-isocyanates. where the hydroxyl functional ethylenically unsaturated polymer precursor is a copolymer obtained from (a) one or more C_{1-14} alkyl(meth)acrylate(s) (b) one or more polybutadiene derived polyol(s); hydrogenated polybutadiene derived difunctional polyol(s); poly(ethylene / butylene) derived difunctional polyol(s); non-crystalline polyether glycol(s); and (c) one or more poly-functional compounds comprising hindered, tertiary carboxylic acid group(s) therein and a pluraility of reactive, primary hydroxy groups.
- 8. (Previously Presented) A polymer obtained by the method of claim 7.

- 9. (Previously Presented) A radiation curable adhesive formulation comprising (by weight) 100 parts of one or more polymer(s) as claimed in claims 2 or 8; together withfrom about 1 to about 120 parts of one or more tackifiers.
- 10. (Previously Presented) A film laminate comprising a plurality of layers and between at least two thereof, is a polymer as claimed in claims 2 or 8 or a formulation as claimed in claim 9.
- 11. (Previously Presented) A polymer as claimed in claim 2 wherein the rubber derived polyol is selected from polybutadiene derived polyols, hydrogenated polybutadiene derived diffunctional polyols, poly(ethylene/butylene) derived diffunctional polyols, non-crystalline polyether glycols and mixtures thereof.
- 12. (Previously Presented) A polymer as claimed in claim 2 wherein acrylic derived polyol is selected from acrylic polyols having a glass transition temperature from -85°C to 30°C.
- 13. (**Previously Presented**) A polymer as claimed in claim 2 wherein the weight ratio of rubber-derived polyol to acrylic-derived polyol is from 0.1 to 10.
- 14.(Previously Presented) The polymer according to claim 2 wherein R_2 is an alkyl or alkoxy residue.
- 15. (Previously Presented) The radiation curable adhesive formulation according to claim 9 wherein said one or more tackifiers are present at from about 20 to about 80 parts.
- 16.(Previously Presented) A film laminate comprising a plurality of layers and between at least 2 thereof, is a polymer as claimed in claim 14.
